

BODY SET TYPE SPEAKER APPARATUS

Abstract

An ear-hanging type speakerphone unit that allows users to listen to both sounds from the speaker and sounds from the outside environment, while suppressing leakage of the sounds emanating from the speaker to the outside environment, is provided for. A directional speaker is adjustably held with its speaker face being, for example, approximately 1 to 2 cm. away from the opening of an external auditory meatus, such that an open air space is formed between the speaker face and the opening of the meatus.
